WNTC Organizes, New Faces Welcome

WNTC is looking for announcers and engineers for its staff. With some positions filled already by interested freshmen and upperclassmen, our school radio station is planning a further organizational meeting this Monday evening. For the convenience of the freshmen and sophomores, this meeting will take place in Hill Cafeteria at 7:30 P. M. All those interested are invited.

Working on WNTC is designed to give those concerned practical experience in station operation, announcing and/or engineering—and each of these facets is varied in its possibilities!

The variation in engineering jobs runs from operating the control board during broadcasting through the design and testing of circuits and components to be used in future station operations. WNTC's facilities, located adjoining room 350 in Snell Hall, have been assembled by members of the engineering department. Furthermore, self designed "remote" equipment is used for broadcasting hockey, basketball, and other sports events.

In announcing, one finds the same amount of potential for learning through experience. Some prefer working as "disc jockeys" who run their own shows, while others specialize in news and sports casting, etc. Those who go into announcing find their speech courses, public speaking, and leadership improving.

Administration, it goes without saying, is one of the most important parts of WNTC's operation. With the many openings available each year one quickly finds himself assuming station operational responsibility. Most of these leadership positions are open after one or two semesters of affiliation with the station.

All facets of WNTC have been improved lately due to the great amount of work which has been done on station facilities. A new paint job and functional rearrangement of the studios has given the station a lift. Also, much useful equipment has been added to aid in operation. More improvements are still being accomplished each day.

These opportunities are offered to all students interested in radio work. It can be valuable, too; some of WNTC's past members have worked on commercial stations for the summer. In its broadcasting to Clarkson and Potsdam State, with members from both colleges, WNTC will continue as the station of the "Northern Twin Colleges."
